

# Alu. Strip Detectable Warning Tape

“**GOLDEN**” Brand Aluminum strip detectable tape is a strip of detectable aluminum foil totally encapsulated between a polythene base layer and a printed polythene protective covering with a 10 - 50 mm wide aluminum strip and is not less than 10 - 12 micron thick. When buried, the Alu.strip has contact with the earth for its entire length maximizing the potential for inductive location. The aluminum strip detectable tape is mainly used for marking of non-metallic underground pipes and cables.

## Product Feature

- Specially manufactured to customers requirements.
- Not less than 99.5% purity aluminum foil.
- High Tensile strength.
- Totally encapsulated aluminum foil prevents corrosion.

## Advantage:

- Available in customized text.
- Available in various colours.
- Width from 50 mm to 600mm.
- Thickness from 100 to 500 micron.
- Easily traceable by the help of cable locator.
- Aluminum Strip Detectable Warning Tape can be manufactured in various width, thickness with customized text & roll length.

## Size:

50	MM	X	100	MICRON	X	500	MTRS
